

## **Asbestos NESHAP for Air District Inspectors**

### **Course #251**

**This course is for air district inspectors only.** This one day course addresses the health effects of asbestos exposure and the Demolition and Renovation NESHAP requirements for asbestos containing building materials. The emphasis is on inspector safety. Case development, the decision to enter containment, sampling and decontamination are also discussed. Inspectors are encouraged to share experiences.

Upon completion of the course, students will be able to:

- Identify different types of asbestos and the types of products that contain asbestos
- Understand the different types of health effects associated with asbestos exposure
- Recognize what regulated asbestos containing material (RACM) is
- Describe the types of methods used to identify and quantify asbestos
- Describe the requirements for identifying presence and amount of asbestos in facilities being renovated or demolished
- Describe owner/operator RACM removal requirements and air district notification requirements prior to renovation or demolition
- Describe common compliance mistakes
- Describe the key components of proper asbestos removal and disposal, including chain of custody requirements
- Understand asbestos health and safety considerations conducting field inspections
- Understand the process of conducting an air district asbestos compliance inspection

**THIS IS NOT AN “AHERA” CERTIFIED TRAINING COURSE**
